## **Corporate RoHS Compliance and Lead Free Policy**

Ironwood Electronics strives to offer products as RoHS compliant including the absence of lead.

Ironwood Electronics defines RoHS compliant as pertaining to a product in which all sub-components (raw materials) have been declared by their respective factories or suppliers as RoHS compliant. Products are offered as RoHS compliant only after sufficient evidence is provided by our vendors.

RoHS compliance statements regarding Ironwood Electronic products are based on these suppliers' RoHS documentation.

### **Compliance Actions**

- Ironwood Electronics is committed to a cleaner environment and maintains close contact with new developments in the electronics industry related to RoHS / WEEE initiatives
- A RoHS team has been assembled from various departments in the Ironwood Electronics organization to address issues relating to product compliance with RoHS / WEEE initiatives
- Ironwood Electronics has developed procedures to receive specific information from suppliers on the content or chemistry of various materials containing substances which are restricted or banned under the RoHS directive
- Banned substances may be present in Ironwood Electronics legacy adapters and sockets. Legacy products are defined as products created prior to the RoHS / WEEE initiatives
- Where applicable by law, some new products may contain lead based solders. However, to the best of our knowledge, conforming materials have been evaluated to contain no other banned substances
- RoHS compliant legacy products are available by request with lead-free solder alloys for the vast majority of Ironwood products
- In most cases, no additional tooling fees are required to convert a product to RoHS
- All existing non-RoHS legacy products are converted to RoHS compliancy and use RoHS compliant sub-components as existing raw materials are depleted
- Ironwood Electronics works closely with all suppliers to ensure all newly developed products are 100% RoHS compliant
- The Ironwood Electronics website gives clear and detailed information as to a products RoHS compliancy and gives clear and detailed information on how to order RoHS compliant versions products if not currently available
- Where required by law or when requested by a customer, Ironwood Electronics packaging will include RoHS compliant designations in the form of a RoHS symbol or a RoHS certificate
- The Ironwood Electronics Quality Manager is available during business hours to answer any questions regarding Ironwood Electronics RoHS compliancy
